

Definitions about properties/actions/events

July 14, 2021

Ryuichi Matsukura

Fujitsu

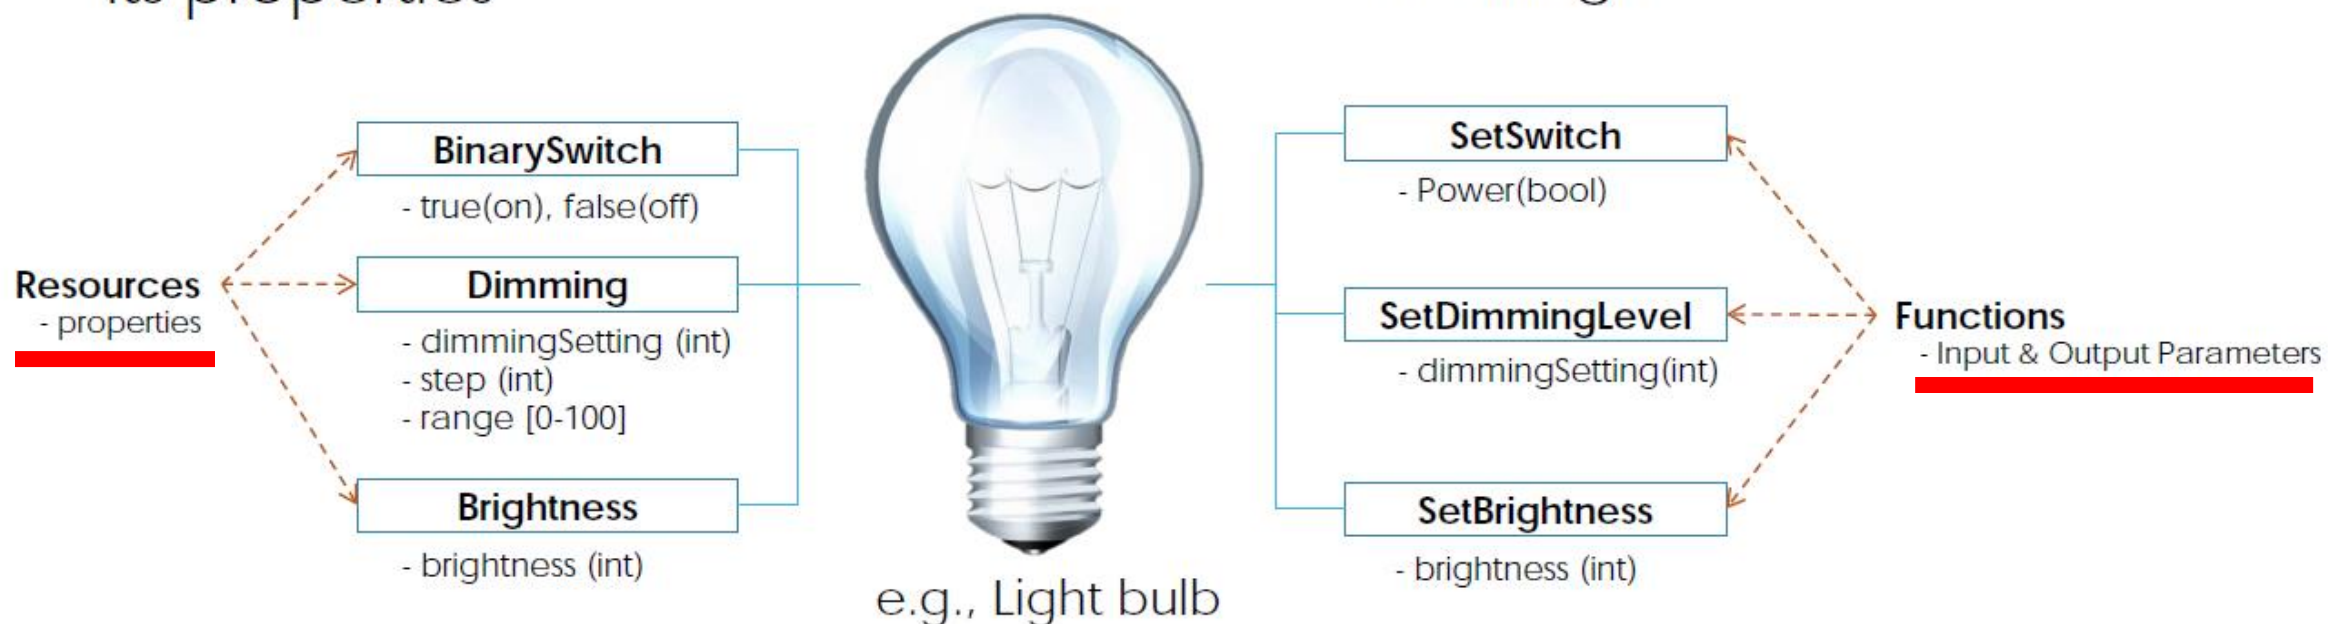

Introduction

- How to integrate other platforms/protocols like LWM2M or IPSO.
- Two primary models for API design: RPC and REST, for most software developers.
 - gRPC vs REST: Understanding gRPC, OpenAPI and REST and when to use them in API design
 - <https://cloud.google.com/blog/products/api-management/understanding-grpc-openapi-and-rest-and-when-to-use-them>
 - REST vs RPC: What problems are you trying to solve with your APIs?
 - <https://cloud.google.com/blog/products/application-development/rest-vs-rpc-what-problems-are-you-trying-to-solve-with-your-apis>

Approaches to definition of various Things

- By defining resources of things and its properties
- By defining functions/operations of things

- (no Verbs) + Objects

*Fixed set of verbs (CRUDN) from transport layer will be used

- Resource model in RESTful Architecture
(e.g., W3C, CSEP, etc.)

- (Verbs + Objects)

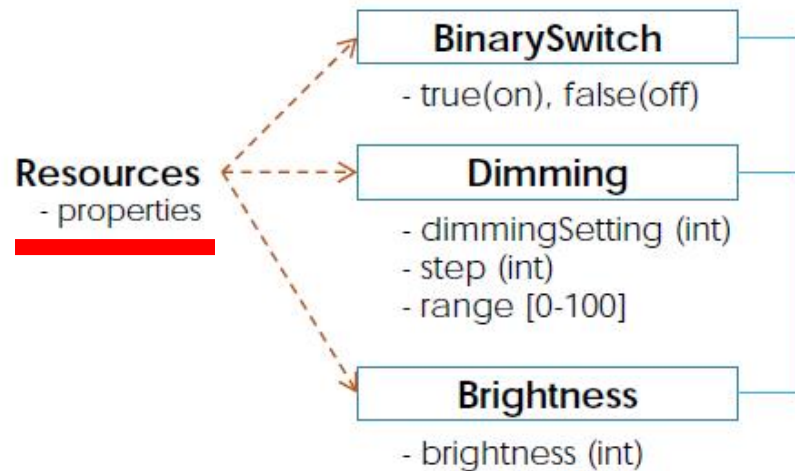

- RPC model

Approaches to definition of various Things

- By defining resources of things and

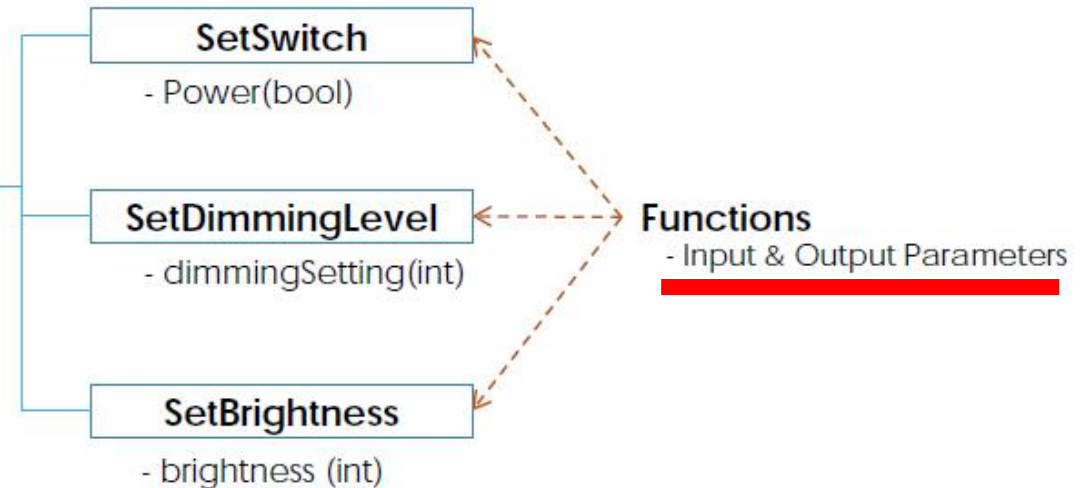

Properties

e.g., Light bulb

- By defining functions/operations of thing

Actions

- (no Verbs) + Objects

*Fixed set of verbs (CRUDN) from transport layer will be used

- Resource model in RESTful Architecture
(e.g., W3C, CSEP, etc.)

- (Verbs + Objects)

- RPC model

```

“properties”: {
  “Switch”: {
    “type”: “boolean”,
    “forms”: [...]
  },
  “Brightness”: {
    “type”: “number”,
    “forms”: [...]
  },
},

```

Definition by just properties

```

“properties”: {
  “Switch”: {
    “type”: “boolean”,
    “readOnly”: true,
    “forms”: [...]
  },
  “Brightness”: {
    “type”: “number”,
    “readOnly”: true,
    “forms”: [...]
  },
},
“actions”: {
  “SetSwitch”: {
    “input”: {
      “Switch”: “boolean”
    },
    {
      “output”: {
        “Switch”: “boolean”
      },
      “forms”: [...]
    },
  },
  “SetBrightness”: {
    “input”: {
      “Brightness”: “number”
    },
    {
      “output”: {
        “Brightness”: “number”
      }
    },
  },
},

```

Definition by properties
and actions

Property vs. Action

- Devices defined by Properties can be mapped to both Properties and Actions of WoT.
 - But mapping to actions can be a verbose representation.
 - LWM2M, NETCONF, and TR-069(BBF) are defined with Properties.
 - These protocols are used in the device managements.
 - OCF, KNX, BACnet, and ECHONET are defined with mainly Properties.
- Simple to map these protocols to properties rather than actions.

Events

- For devices defined by properties, events are defined as property changes.
 - Simple to map these protocols to properties rather than events.

```
“properties”: {  
  “Temperature”: {  
    “type”: “number”,  
    “observable”: true,  
    “forms”: [...]  
  }  
}
```

Definition by just properties

```
“properties”: {  
  “Temperature”: {  
    “type”: “number”,  
    “forms”: [...]  
  }  
}  
“events”: {  
  “TemperatureChanged”: {  
    “Temperature”: {  
      “type”: “number”,  
    }  
    “forms”: [...]  
  }  
}
```

Definition by properties
and events

Device difficult to define as properties

- Only Actions and Events can define the interface.

```
“properties”: {  
    },  
    “actions”: {  
        “StartMotors”: {  
            “forms”: [...]  
        },  
    },  
    “events”: {  
        “OverHeated”: {  
            “Temperature”: {  
                “type”: “number”,  
            }  
            “forms”: [...]  
        }  
    }  
}
```

No property definition

Example: StorageBattery – ECHONET

- Storage battery has 55 properties and 2 actions

Property Resource Name	Access Method	Data Type	EPC (EL)	プロパティ名称 (EL)	Note
acEffectiveChargingCapacity	GET	number	0xA0	AC実効容量 (充電) AC effective capacity (charging)	
acEffectiveDischargingCapacity	GET	number		AC実効容量 (放電)	
acChargeableCapacity	GET	number			
acDischargeableCapacity	GET	number			

Properties part

Actions part

ECHONET Lite Web API Guidelines Device Specifications					Date: Jun 25, 2021 Version 1.3.0 ECHONET Consortium
Property Resource Name	Access Method	EPC (EL)	プロパティ名称 (EL)	Note	
resetCumulativeDischargingElectricEnergy	POST	0xD7	積算放電電力量リセット設定 Measured cumulative discharging electric energy reset setting		
resetCumulativeChargingElectricEnergy	POST	0xD9	積算充電電力量リセット設定 Measured cumulative charging electric energy reset setting
